Overdrive is releasing a new edition of the Libby App that will go live soon. Please take a look at the changes and examples below.

Changes:

1. **Tags are now in the navigation bar:** Instant access to **Tags** in the navigation bar allows users to organize lists of titles they want to read, want to be notified about, and more.

2. **Timeline and Notices have moved to the shelf: Timeline** and **Notices** on the Shelf, all information about past or present loans and holds is consolidated in one area.

Title Descriptions in lists: Each title in lists and search results will have a three-line excerpt of its description so that users can evaluate titles more quickly.

4) Users can create a Recovery Passkey:

Users can create a Recovery Passkey to back up their library cards, tags, and reading history on their device and transfer that data to other devices. It's simple, highly secure, and free of logins or passwords to remember. Passkeys are supported in Libby on iOS 17+ and Android 9+ devices.

Additionally, for enhanced security, **Setup Codes will reverse direction**. The eight-digit setup code will show on the user's additional device. The user will enter the code on their original device to copy their data to the additional device. **This is found on the Main Menu**.

Your Information

Get a recovery passkey for your Libby cards and tags.

Back Up Your Data

Use a setup code to sync with another device or browser.

Copy To Another Device

If you need to completely sign out of the Libby app...
